

Explicit production intent, absent specialized scoring

Conservative lower bounds in a frozen 508-task inventory: VerilogEval, RTLLM, and an audited open-tool CVDP subset.

Category	Contract-positive tasks	Matching scored oracle	Observed coverage gap
CDC / RDC intent structural intent sufficient	11 / 508	0 CDC/RDC checker	11 / 11
Power-on state explicit initial-state contract	28 / 508	0 randomized / X-aware	28 / 28
Temporal correctness bounded, persistence, progress, protocol	98 / 508	0 native property / formal	98 / 98
Synthesis equivalence original RTL + synthesis required	16 / 508	0 equivalence / post-synth compare	16 / 16

These are missing-evidence counts, not defective-design counts; finite simulation remains valuable but does not instantiate the named oracle.
